

# Alan Sorin

Managing diabetes is a lifestyle

**Occupation:** Senior Account Manager, Indeed

**Lives in:** New York, New York

**Fun facts:** Film buff, globetrotter

## About Alan

*At age seven, Alan was vacationing with his grandparents in Florida and wound up in the ER. His blood sugar was 550. He returned home to New York with a type 1 diabetes diagnosis—a huge change for a young boy. His parents were instrumental in framing diabetes management to him as a lifestyle. Now 25 years old and working at a fast-paced job in Manhattan, managing his condition is second nature.*

*Alan had previously used a different CGM and his experience was not ideal, so he spent six years without one, monitoring his sugar old-school style with fingersticks. When Alan moved to The Big Apple, his new endocrinologist told him about Eversense, and he was intrigued by the prospect of a sensor that lasts 90 days.*

*On a typical day, Alan is conscious of eating a healthy diet while still enjoying the varied NYC dining scene. He also checks his Eversense app*

*twice a day: upon waking and before he goes to sleep.*

*“I thought I really had everything under control before,” he says. “I didn’t realize how much easier life could get until I got inserted with Eversense!” Since Alan is an avid traveler—he especially enjoyed visiting Greece—he loves the simplicity of Eversense. “I only have to throw a few adhesive patches and a charger in my bag. No extra space, no extra time, and no extra weight.”*

**On Eversense:** Alan appreciates the peace of mind that Eversense gives his parents. “I love that I can share the reports with my doctor and my loved ones,” he says. He is also impressed by Eversense’s accuracy. “When I calibrate and I do my fingerstick, my numbers are so close in line with what Eversense is reading to me that it makes me feel even more confident.”

**“Growing up, I didn’t share my story as much. I tried to hold back the fact that I had diabetes. Now I want to help people whereas, I couldn’t growing up.”**
