

# Claudio Gotti

Going the distance

**Occupation:** Heating & Cooling Technician

**Lives in:** Udine, Italy

**Fun facts:** Professional Motorsport Driver, Rally school instructor

## About Claudio

Claudio was diagnosed with type 1 diabetes at the age of 7. As a young boy, his dream was to be a race car driver and at the age of 8 he drove his first kart. He was afraid due to his diagnosis that he would not be able to get his race car license. "Thanks to my commitment and determination, along with my team of doctors, they trained me on new CGM technologies that helped me become one of the first type 1 diabetic race car drivers. Without my CGM, I would not have been able to participate and win, difficult races and competitions."

*On Eversense: "In extreme sports, especially motor car racing, perfect control is necessary for a type 1 diabetic. For a good performance, Eversense is essential. Having the sensor placed under the skin, the flexibility of easily repositioning the transmitter with adhesive patches, the compactness and versatility make it essen-*

*tial to my every day life."to move forward and ultimately become a TD1 advocate. Claudio tried other CGMs, so the 180-day switchout with Eversense is a huge benefit, plus he can take the CGM off whenever he wants to.*

*"With Eversense, I can check my glucose reading on my watch as I'm driving at top speeds during a competition. This is especially valuable because some motor car races last 12 consecutive hours. It is imperative that I know how my glucose is trending to help avoid lows, which is a very dangerous situation for me. Now, with Eversense as my "partner," I want to take part in the most difficult race in the world circuit: the Dakar Rally."*

**"I can push myself beyond the boundry of the supposed unconquerable."**
